Hospital Room Connectivity using Graph and BFS (C++)

```
#include <iostream>
#include <vector>
#include <queue>
#include <string>
using namespace std;

int main() {
    // Hospital rooms
    vector<string> rooms = {
        "Emergency", "Lobby", "Pharmacy",
        "Ward A", "Ward B", "Laboratory"
    };

    // Graph using adjacency list
    vector<vector<int>> graph(6);
    graph[0] = {1, 2};
    graph[1] = {0, 3, 4};
    graph[2] = {0};
    graph[3] = {1};
    graph[4] = {1, 5};
    graph[5] = {4};

    vector<bool> visited(6, false);
    queue<int> q;

    // Start BFS from Emergency
    visited[0] = true;
    q.push(0);

    cout << "Hospital Rooms BFS Traversal:\n";

    while (!q.empty()) {
        int current = q.front();
        q.pop();
        cout << rooms[current] << endl;

        for (int next : graph[current]) {
            if (!visited[next]) {
                visited[next] = true;
                q.push(next);
            }
        }
    }

    return 0;
}
```
